
The Rainbow® is now certified as **asthma & allergy friendly™** by the Asthma and Allergy Foundation of America (AAFA).

This certification is only awarded to vacuum cleaners that have been scientifically proven to remove allergen from carpeting, while retaining allergen within the vacuum cleaner.

Testing according to **Allergy Standards Limited** (ASL) Protocols scientifically proves that the certified vacuum adheres to these principles:

- It removes a significant amount of allergens from carpeting.
- Allergen that is removed is retained within the vacuum cleaner.
- The removal of allergen is a result of the action of the vacuum cleaner and the allergen is not simply re-distributed.
- The vacuum cleaner does not experience a reduction in allergen pick-up in the presence of a partially filled receptacle.
- The operator of the vacuum is not excessively exposed to allergen when emptying the receptacle.

The asthma & allergy friendly™ Certification mark clearly demonstrates a business to consumer point of view that Rexair's Rainbow Cleaning System has the capability to positively contribute towards a healthy environment.

About AAFA

The reputation within the United States of the AAFA as the leading not for profit organization representing the interests of asthma and allergy sufferers is unsurpassed. AAFA is the most trusted source for unbiased information and the first place that politicians, patients, parents, consumers and media go to when they need information about asthma and allergies.

About ASL

Allergy Standards Limited (Dublin, Ireland) is a physician-led organization with a strong scientific team. ASL is involved in several areas where indoor environmental quality is a relevant business issue. The ASL laboratory has a track record in hospital infection control, allergen/ mold monitoring and air particulate monitoring in homes and commercial buildings.
